# **Systems Biology**

The study of how living organisms stay alive. It includes how structure and function are connected and how life has developed specialized parts that work together to make life.

## **Characteristics of Life**

- **Cellular Organization – Cell Theory**
  - All living things are made up of one or more cells
  - The cell is the smallest unit capable of life functions
  - Basic cellular structure is similar in all organisms
  - All cells come from preexisting cells
- **Reproduction**
- **Metabolism**
- **Homeostasis**
- **Heredity**
- **Responsiveness**
- **Growth and development**

## Section 1.1 – Cell Biology

### Levels of Organization

Atoms and molecules

★ Cells

★ Tissues

★ Organs

★ Organ systems

Organism

Population

Community

Ecosystem

Biome

Biosphere

### Prokaryotic Cells

- Considered the first cells
- Very primitive cells
- No membrane bound nucleus or organelles
- Can carry out most cellular functions but not as efficient
- Exist today, we know them as bacteria

### Eukaryotic Cells

- Highly organized cells
- Have membrane bound nucleus and organelles
- Perform cellular functions in specialized structures
- Are found in animals, plants, protists (single cell organisms) and fungi
- Many types of specialized cells

## The Model cell:

- **STRUCTURE OF AN ANIMAL CELL**

Use the provided word bank to label the structure of the provided animal cell.

Nucleolus  
Cytoskeleton  
Rough Endoplasmic Reticulum  
Nuclear Envelope

Ribosome  
Golgi Apparatus  
Lysosome  
Vesicle

Mitochondria  
Smooth Endoplasmic Reticulum  
Cell Membrane  
Cytosol

## • STRUCTURE OF A PLANT CELL

Use the provided word bank to label the structure of the provided a plant cell.

Nucleolus  
Cytoskeleton  
Rough Endoplasmic Reticulum  
Nuclear Envelope

Ribosome  
Golgi Apparatus  
Lysosome  
Vesicle

Mitochondria  
Smooth Endoplasmic Reticulum  
Cell Membrane  
Cytosol

## **Make a Table in your notebook**

<b>Organelle</b> <b>-spelling</b> <b>counts</b>	<b>Function</b> <b>-use proper</b> <b>terminology</b>	<b>Appearance</b> <b>(Make a diagram)</b>	<b>Life process or</b> <b>analogy of</b> <b>what it does</b> <b>-something that</b> <b>you can remember</b>

## **Life Processes Where do this happen in a cell?**

- Intake of nutrients
- Movement
- Growth
- Response to stimuli
- Exchange of gases
- Waste removal
- Reproduction

### **QUESTIONS:**

- Page 16 questions 1-5
