Making Connections

- raw materials + light energy + fertilizer (chemical energy) \rightarrow plant (chemical energy) \rightarrow prepared food (chemical energy) \rightarrow blood sugars (chemical energy) \rightarrow body tissue (chemical energy), movement (kinetic energy), or heat loss (thermal energy)
- The advantage of using fertilizers to increase crop yield is that, although we input energy to make the fertilizers, the energy we gain back is now in a form that is usable by our bodies. The question of whether or not we should fertilize our crops goes far beyond a consideration of the amount of energy used to produce the fertilizer. It should include a weighing of the risks and benefits of both fertilizing (e.g., possibly polluting the ground water) and not fertilizing (e.g., producing less food).

Because the reaction is exothermic, the molar enthalpy of combustion of acetone, ΔH_{c} , is -1.5 MJ/mol .

Evaluation

$$\begin{aligned} \text{(c) Percentage error} &= \frac{|(1.5 - 1.79)|}{1.79} \times 100\% \\ &= 16\% \end{aligned}$$

- (d) The percentage error suggests that heat has been lost to the surroundings as part of experimental error.
(e) If heat is lost to the surroundings, then the observed temperature change in the water and calorimeter, the calculated q values, and the experimental ΔH all will be smaller than predicted.

5.6 THE ENERGY DEBATE

PRACTICE

(Page 344)

Understanding Concepts

- (a) hydroelectric power, nuclear power, burning fossil fuels
(b) All produce power by driving turbines: nuclear and fossil fuels heat water to drive steam turbines, whereas hydroelectric power uses falling water. Hydroelectric and nuclear energy have higher capital costs. Hydroelectric is relatively environmentally benign, fossil fuel burning produces the greatest amount of pollution, and nuclear energy poses the greatest safety risk.

Making Connections

- (Sample answer) The CANDU system uses a heavy water moderator and ordinary uranium fuel, whereas some other systems use ordinary water as a moderator and enriched uranium fuel.
