10.4 Gas Stoichiometry

•	Apply all you have learned in the chapter to solve stoichiometry problems. Eg. Hydrogen gas is produced when lithium metal is added to water. What mass of lithium is necessary to produce 30.0 L of hydrogen gas at SATP?
	necessary to produce 50.0 E or ny drogen gas at 61111.
•	Eg. What volume of oxygen at STP is needed to completely burn 25 g of ethanol in an alcohol burner?
